ABOUT ME

UI/UX Designer with hands-on experience designing and delivering web and mobile applications across FinTech, insurance, and e-commerce. Skilled in user research, usability testing, information architecture, and design systems to create intuitive, accessible digital experiences. Combines user-centered design with full-stack development expertise, improving development efficiency by through reusable UI components and cross-functional collaboration.

PROFESSIONAL EXPERIENCE

Syuenart Collective Studio PLT. | Bandar Puchong Jaya, Malaysia
UI/UX Designer & Frontend Developer *November 2025 - October 2026*

- Designed and helped launch a habit-formation application across mobile and web, developing user flows, wireframes, high-fidelity prototypes, and accessible interfaces validated through 2 rounds of usability testing.
- Identified and resolved 50+ UX friction points across 4–6 digital projects, leveraging user feedback, usability findings, and conversion analytics to guide iterative design improvements.
- Improved development efficiency by 30% through reusable UI components and design system standardization, collaborating with product managers and software engineers to streamline implementation.

Memo Agility Sdn. Bhd. | Kuala Lumpur, Malaysia
Product Designer (Freelance) *August 2025 - September 2026*

- Digitized 30 insurance forms for insurance industry clients by transforming complex manual processes into intuitive digital interfaces, streamlining form completion and improving usability.
- Reduced average form completion time by 25% by collaborating with Business Analysts and Product Specialists to optimize user flows, simplify form navigation, and improve information architecture.

Software Engineer Intern *February 2025 - August 2025*

- Reduced form completion time by 40% and improved UI rendering performance by 30% by streamlining redundant user flows with business analysts and clients, implementing frontend caching, and standardizing reusable UI components.
- Improved backend data processing efficiency by 20% by developing and integrating 12+ RESTful API endpoints using Java Spring Boot and PostgreSQL for the Quotation Management System (QMS).
- Delivered 8+ full-stack application features including form validations, reporting dashboards, approval workflows, paginations, and audit logging across Agile development sprints by collaborating with Software engineers and business analysts to develop, test, and optimize React and Spring Boot components.

PERSONAL PROJECT

KiraFlow — Financial Integration Platform
Undergraduate Thesis Project | Full-Stack Development & UX Research *March 2025 - January 2026*

- Validated multi-bank account-linking workflows through quantitative task-based usability testing, recording a 92% success rate, an average of 7 linked accounts per user, 45 seconds per account, and an error rate below 2%.
- Designed and developed a responsive financial dashboard achieving 4.6/5 user satisfaction, 3-second average load times, and less than 10% mobile–desktop performance variation through caching, asynchronous processing, and optimized rendering.
- Evaluated 6 UEQ dimensions using simulated usability data, with benchmark ratings ranging from Above Average to Good, including 1.4 in Stimulation and 0.86 in Dependability.
- Earned an A grade and Faculty Final Year Project Silver Award for full-stack software development and UX research.

TECHNICAL & DESIGN SKILLS

- **UI/UX Design:** Figma, Maze, Adobe Photoshop & Illustrator, User Research, Usability Testing, Wireframing, Prototyping, Interaction Design, User Flows, Information Architecture, Design Systems, Responsive Design, WCAG Accessibility
- **Development:** HTML5, CSS3, Tailwind CSS, JavaScript, MongoDB, Node.js, Firebase TypeScript, React, Java, Spring Boot, RESTful APIs, PostgreSQL
- **Tools & Collaboration:** Jira, Git, Google Analytics, Agile Development, Cross-functional Collaboration
